My husband and I both read this book although he is the only one of us with diabetes. The book is uplifting and gives hope for those who are willing to take serious measures in order to end diabetes.

The book is a convincing pleading to improve people health, especially those with already bad blood tests, by eating a light diet based mostly on vegetables and fruit, nuts and beans, less meat, and so the like, in essence stuff with more nutrients and less calorie

The book is a persuading arguing to enhance individuals well being, particularly those with effectively ill will tests, by eating a light eating regimen construct generally in light of vegetables and organic product, nuts and beans, less meat, thus the like, fundamentally stuff with more supplements and less calorie. I got most extreme advantage from this book reference of straightforward formulas which make extraordinary strive for lessening glucose normally in 4 weeks. The immense thing about this aide is that, this doesn't contain pointless data.

With a family history of diabetes I want to know how I can prevent this for myself as well as my loved ones. This book gives a simple explanation and break down of how the body breaks down sugars and carbs and what happens to the body as you develop diabetes. It then goes over the Low Carb High Fat diet and why it is beneficial. In addition, it gives recipes for this diet. This is not everything you need to know about the disease and how to prevent it, but it does give some helpful info and tips.

Diabetes is a very mystifying ailment. It takes precision to know your doseage, whether it be pills or insulin. It's very hard for someone like me who has been given so much information about Diabetes but still haven't gotten answers about foods and their impact on your pancreas. This book walks you through information that has never been mentioned by any other doctor or specialist that I've gone to. It clearly gives you insight in what goes on with your body and what to eat and what not to eat.

This book is a quick and direct and the information can save you from suffering from diabetic complications in the future. This is a great book to realize a lot of things on how to manage your blood sugar. From this book you will know how blood sugar increases, how they create problems and the ways to prevent high blood sugar level. I know some relatives who are struggling with Diabetes. They have tried different ways and have taken some medication yet they still aren't satisfied with the results. They are willing to take risk just to end Diabetes. This book will give them hope. The fact that the techniques given will lower their

blood sugar naturally, it will convince them to follow it with the hope of feeling better. Whatever ideas we get on this book are worth to share.

This Text presents a different approach to the traditional treatments for Diabetes. It is thought provoking and offers an outlook of a broad spectrum modality of better understanding and interesting plausible treatments directed at lifestyles and the person as an entity and not a condition. This book is very informative. I highly recommend it as reference source. It also is a great source of new ideas.

This book was quite too short, the book first of all started by explaining what meditation means, then it went further into giving detail info on what leads to production of insulin in the body and what causes insulin. This book basically recommended the intake of low carb diet. My only complain is that the book provided enough recipes and food to prepare and also guide to preparing the meal.
